

Deri O Huiginn

Senior Frontend Engineer

deriohig@gmail.com | linkedin.com/in/deri-o-huiginn-255b68a7 | Spain (Remote)

Senior Frontend Engineer with 8+ years building high-stakes web platforms in air-freight logistics and enterprise security. Led cargo.one's Vue 2 – Vue 3 core booking-platform migration with zero production regressions, cut bundle size 55%, and drove team-wide adoption of agentic AI workflows. Strong in performance engineering, design systems, and leading multi-team frontend initiatives across distributed teams.

Skills

- **Frontend:** Vue, Vuex, React, Redux, React Query, Next.js, Nuxt.js, TypeScript, JavaScript, HTML, CSS/SCSS
- **Architecture:** Design Systems, Performance Optimisation, Scalable Frontend Architecture
- **Testing:** Playwright, Jest, Testing Library (E2E and unit)
- **Tools and Platforms:** Node.js, REST APIs, Webpack, Vite, Storybook, CI/CD, Git, Sentry
- **AI and Developer Productivity:** AI-Assisted Development, MCP (Model Context Protocol), Prompt Engineering, Workflow Automation
- **Leadership:** Mentoring, Cross-functional Collaboration, Agile/Scrum

Experience

cargo.one GmbH Spain (Remote)

Aug 2021 – Present

Senior Frontend Engineer

- Led Vue 2 – Vue 3 migration of the core booking platform serving 30,000 freight forwarders across 172 countries, authoring ~70% of code changes and delivering in 4 months with zero production regressions, unlocking full Composition API, TypeScript, and modernised tooling adoption
- Cut production bundle size by 55% through dependency pruning and Webpack build optimisation, improving Largest Contentful Paint and overall Lighthouse performance scores
- Architected the unit-conversion and dynamic pricing layer handling kg/lbs conversions and real-time carrier rate updates, designing the client-side data model and caching strategy across booking surfaces while coordinating frontend, backend, product, and design teams
- Instrumented end-to-end product analytics (Heap, FullStory, Sentry) across offer and booking flows, surfacing conversion drop-offs and UI errors that drove product iterations and measurable booking-completion gains
- Drove adoption of agentic AI workflows (Claude Code, MCP tooling) across a 20-engineer team, defining implementation, testing, and review guardrails and measurably reducing feature delivery cycle time while retaining full ownership of solution design

IBM Security Guardium Dublin, Ireland

July 2018 – Aug 2021

Front End Developer

- Served as frontend technical lead for Guardium Insights (risk analysis, anomaly detection, audit reporting) and Guardium Analyzer (GDPR/HIPAA database compliance scanning), setting UI architecture, component standards, and code-review practices for 9 frontend engineers
- Drove Carbon Design System adoption across the Dublin engineering org and delivered a 3-day onboarding workshop, establishing shared component standards and reducing UI inconsistency across Guardium products
- Built a WCAG 2.1 AA-compliant React component library adopted across both Guardium products, replacing per-product UI implementations and cutting time-to-ship for new compliance-reporting screens
- Designed and shipped the visual rule builder powering Guardium Insights anomaly detection and compliance alerting, a drag-and-drop policy editor compiling user-defined conditions into detection rules that let customers author security alerting flows without engineering involvement

Earlier Experience (2016–2017): Full Stack Web Developer at Scholar GPS (Los Angeles) and Software Design Ltd (Dublin) – built PHP/MySQL academic research portals and component-based WordPress frameworks for finance and credit-union clients

Education

Dún Laoghaire Institute of Art, Design and Technology (IADT)

Dublin, Ireland

- BSc (Hons), Computing in Multimedia Systems / Web Engineering – First Class Honours, 2016
